Besides kickback, the directional reaction forces which you must control are push and pull. Kickback, push and pull reactions are all illustrated on these pages. HOW SHOULD YOU MAINTAIN CONTROL O F THE SAW? 1. First of all, you must keep the front handlebar diameter in the webbing between the thumb and index finger of your left hand. But with the arrival of the Define XL from Ginger6, we've now seen gaming PCs built around both cards.Perhaps it's here, in the real world, that we can establish the better of the two cards? Well, perhaps if Ginger 6 had paired the HD 6990 with Intel's all-conquering i7 2600K CPU we'd have a straight fight.Last issue, Dino PC went and clocked the 2600K up to 5GHz for its Evolution 2600K rig, and working with the GTX 590 the resultant benchmark results were frankly bonkers. Ginger6's rig comes in at exactly the same price point, but instead it's the cheaper, less powerful Core i5 2500K inside the Define XL.Don't get us wrong, the 2500K is a great chip. It offers great value for money for those fiscally disinclined to plump for the i7. The thing is, using a phrase like 'value for money' about a component in the same PC as a E540 graphics card seems a bit silly. The HD 6990 isn't about value; it's about extreme performance.The i5 2500K's presence means two things. Firstly, you won't be making the most of that ridiculous graphics card. Try as it might, the HD 6990 won't render as many frames with a 2500K as it would with the 2600K. In all fairness, Ginger6 have overclocked this i5 up to an impressive 4.9GHz, but it's a four-core, four-thread CPU. Compared to the eight threads of the 2600K (which smart applications can dedicate individually to GPU rendering tasks), it's a far from ideal pairing with the HD 6990.Secondly - and rather damningly - it means that the Define XL has less performance to offer for more money than the Evolution 2600K. Not only is the GTX 590 a pricier card, but the i7 2600K CPU has been squeezed in to that £1,799 price tag. In short, it's impossible to recommend; there's absolutely no reason not to buy the Dino PC instead, even with the option to have this Ginger6 machine with a GTX 590 in as well.BenchmarksCPU performanceCinebench index: Higher is betterDefine XL - 7.50Evolution 2600K - 8.97Phoenix Hydro X - 7.84DirectX 11 tessellation performanceHeaven 2.0 Frames per second: Higher is betterDefine XL - 38.3Evolution 2600K - 32.4Phoenix Hydro X - 38.4DirectX 11 gaming performanceDirt 2 Frames per second: Higher is betterDefine XL - 94.6Evolution 2600K - 178Phoenix Hydro X - 90Read the full Dino PC Evolution 2600K OC reviewRead the full Palicomp Phoenix Hydro-X OC reviewGood pointsAw, now we've told the Define XL off and its monolithic face is looking all sad. Let's mention the good aspects of this build, redundant though these have been made by the CPU debacle.The Fractal Design XL case is amazing. Long after all the components are rendered obsolete by Moore's Law and the deafening stampede of technological advancement, you'll still use this case. It's huge, quiet, solid, and packed with drive bays.Actually, storage has been bizarrely overdone - 120GB of SSD and 2TB of HDD space enough for you? It's all very well and good, but we'll bet any gamer would rather the money was spent on a better CPU.It's a swing and a miss from Ginger6 then, and a missed opportunity to settle the AMD vs Nvidia flagship card wars.Follow TechRadar Reviews on Twitter:
